

Modules

SET OF MODULES TO ADAPT OUR SOLUTIONS TO EACH CUSTOMER NEEDS

Our **modules** add new functionalities to our products according to each customer requirements. In this way, it is possible to offer customized solutions by integrating the most advanced **facial recognition technology**.

BioMaster

CENTRALIZED MANAGEMENT

Central management application that allows to synchronize the data across all Herta solutions and devices, even though the network is down. Herta's software will work without any interruption standalone and, once the network is up again, data will be synchronized.

BioCompare

FORENSIC FACE ANALYSIS

Tool that finds a specific subject among all the alarms of an existing database.

BioCom

INTEGRATION WITH APPLICATIONS

Communications module to integrate Herta software with third party systems.

BioDatabase

IMAGE IMPORTATION

Management tool that facilitates the automatic incorporation of a large number of subjects into the database.

BioRegister

SUPERVISED ENROLLMENT

Module for the enrollment/registration of subjects in a supervised mode.

BioAlarm

ALERTS ON MOBILE DEVICES

External visualization module that enables the remote reception of alarms on mobile devices.

BioID

MOBILE APP FOR FACIAL IDENTIFICATION

Mobile app that detects, enrolls and identifies subjects in real-time.
